

EU ETS Reporting

How to save time and money

Our ETS Support Facility for Aircraft Operators helps monitoring, reporting and make processes go smoothly!

The EUROCONTROL Emissions Trading Scheme Support Facility provides aircraft operators and verifiers with flight and emissions information to help them meet their monitoring and reporting obligations under the European Union's Emissions Trading Scheme.

Involved in EU ETS monitoring and reporting?

- You have to **report less than 3 000 tonnes CO₂** or you have **emitted less than 25.000 tonnes CO₂**; benefit from a "Simplified Procedure" which waives you from further verification. Obtain the report from the EUROCONTROL Support Facility, complete it with your administrative information and send it to the Competent Authority without further verification.

The ETS SF now includes all the necessary functions for initiating a submission without verification **saving time and money**.

- You have performed **less than 243 flights per** period for three consecutive four-month periods (but emitted > 25.000 tonnes CO₂): you are considered a Small Emitter and can use the Support Facility to obtain a draft of your annual emissions, **saving time in monitoring**. Validation is still required by the verifier before submission to the Competent authority.
- You are an **aircraft operator (other than a Small Emitter)**: obtain flight and emissions information to assist you performing checks against your own data. Avoid potential issues by identifying missing flights, spotting differences in the application of exemptions, or even filling data gaps.
- You are a **verifier**: use EUROCONTROL's information and data to support verification of an aircraft operator's annual emissions report, whether this has been generated from the aircraft operator's own data or by relying on information provided by EUROCONTROL.
